

Dual diagnosis is our sole focus

Outcomes Report

WestBridge uses their Recovery Index to track progress of their participants throughout their course of treatment.

WestBridge tracks 14 domains of recovery:

Housing, Peer Relationships, Family Relationships, Mental Health, Substance Use, Spirituality, Tobacco Use, Diet, Exercise, Sleep, Physical Health, Hygiene, Employment and Education.

The data is reflected in the following 13 graphs - combining education and employment into one. These domains are quantified by 5 scale point definitions assessing stage of change, where higher scores represent greater self-management, independence, and health, depending on the relative domain.
